

BI Drive-BI® is a portable, hand-held receiver that detects the presence of clients wearing BI HomeGuard® 200, BI TAD® or BI 9000® Series transmitters from several hundred feet away. It enables supervising officers to conveniently monitor clients from outside a home, work, school or counseling session.

Product Overview

With BI Drive-BI, officers can extend monitoring outside of an offender's home to verify compliance with schedule requirements and sentence restrictions - without physical interaction or interruptions to the client's program. Drive-BI can easily be recharged, and messages recorded by the system can be transferred to a client's record at the end of the day.

The Drive-BI stores up to 250 messages, and includes the transmitter type, identification number, battery status, and tamper status. The unit also stores the date and time that the transmitter messages are received. The internal, rechargeable battery provides up to eight hours of continuous operation. If the battery dies, all information and settings are retained in non-volatile memory. The Drive-BI battery can be recharged or run using a 120V external power supply or a 12V cigarette lighter adapter.

Features:

- Lightweight and portable
- Detects HomeGuard 200, BI TAD and BI 9010 transmitters
- Reports tamper and low-battery conditions
- Internal, rechargeable battery provides approximately 8 hours minimum of power when fully charged
- 12V cigarette lighter adapter
- Portable and car-mount antennas
- 300 foot signal range (approximate)
- Stores up to 250 transmitter messages
- Easy to read, backlit display
- Data transfer to PC capability
