

The BI TotalAccess® software platform provides access to RF, GPS and alcohol monitoring caseloads for officers seeking efficiency at every turn.

A Single Point of Access

BI TotalAccess was designed with officers in mind. Providing one interface from which to manage an entire caseload, TotalAccess offers intuitive functionality and time-saving conveniences. Officers juggling multiple types of monitoring equipment can easily retrieve client data, reports, inventory information, and more using this single platform.

Product Overview

Comprehensive and easy-to-use, TotalAccess is the software application that supports the BI continuum of radio frequency, GPS, and alcohol monitoring equipment. TotalAccess is available 24x7x365 from any web-enabled computer with Internet Explorer 6.0 or higher or a properly configured PDA. Users simply log on via www.bi.com with a secure username and password. From there, users are able to:

- Enroll and inactivate clients from the system
- View and process alerts
- View, enter and modify data including zones, schedules, and client demographics
- Create, run, schedule, and download reports
- Enter procedures for responding to violations and customize violation notifications
- Combine events to control alert notification

Within the TotalAccess platform, users specify how they want to be notified of violations and alerts. Officers can choose to be notified via email, fax and/or page (text message) based on alert priority level and escalation procedures.

Conveniences for Mobile Officers

TotalAccess provides several time-saving features for officers on the go. Officers with PDAs supported by Pocket PC 2003, Windows Mobile 5.0 or Pocket Internet Explorer can view their caseload, close alerts, send client notifications, and more. With one click, officers can close or delay alerts straight from an email hyperlink.

Advanced Mapping Capabilities

Officers with GPS caseloads have access to sophisticated mapping technologies that are integrated with TotalAccess. Microsoft® MapPoint® and Bing™ Maps for Enterprise are used to build zones and review client movements. Bing Maps can be viewed in 2-D or 3-D and provide road, aerial, and bird's eye views of GPS points.

Key Features

One Platform, Multiple Equipment Types

- Radio frequency
- GPS
- Alcohol monitoring

Accessibility

- Internet accessible 24x7x365
- Secure login from www.bi.com
- No third-party software or plug-ins required
- Easy-to-use web interface

Reporting

- Standard and custom reports
- Export to Word, Excel or PDF
- Scheduled one-time or recurring reports

PDA Compatibility

- Pocket PC 2003
- Windows Mobile 5.0
- Pocket Internet Explorer

Robust Reporting

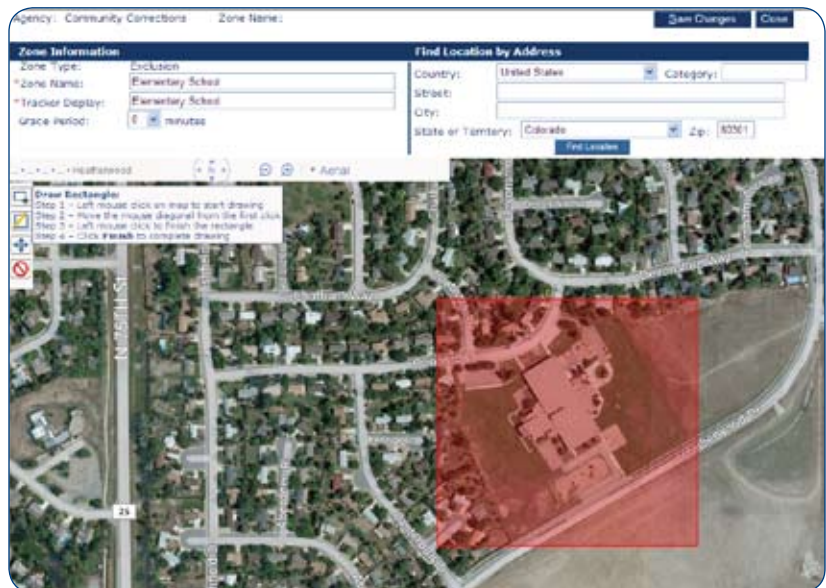

Several standard reports are available within TotalAccess to review client activity, alert summaries, caseload statistics, inventory status and more.

Beyond standard reporting capabilities, users also have the ability to create custom reports within TotalAccess. Reports can be exported to a variety of applications including Word, Excel or a PDF document. Additionally, users can schedule report delivery to a designated email or fax number.

Agency Level Access

TotalAccess incorporates several features that support agency level efficiency. Officers can now access multiple agency numbers with one username.

Inventory management is made easier by the ability to view inventory data across multiple agencies and easily transfer equipment between them. Group zones also save officers time by enabling them to assign a set of zones to some or all of their caseload rather than building them individually for each client.
