

BI Mobile®

CONNECTING OFFICERS & CLIENTS FOR INCREASED COMPLIANCE

Developed specifically for community corrections programs, BI Mobile® alleviates challenges agencies and clients may face related to access to a phone. BI is the first and only EM provider to offer a mobile device that runs on a proprietary operating system for a high level of device security.

CUSTOM OPERATING SYSTEM

BI Mobile runs on a standalone operating system, developed in-house by BI software engineers, preventing clients from disabling the software or installing third-party applications.

LEAST RESTRICTIVE FORM OF SUPERVISION TECHNOLOGY

Pre-installed with BI SmartLINK®, this solution enables scheduling, text messaging, biometric check-in, document management, community resources, and other features. Agencies use in lieu of client-worn monitors or to complement a BI GPS, alcohol or RF device.

ABILITY TO CONTROL DEVICE ACTIVITY

BI Mobile limits client access to traditional smartphone functionality such as the ability to browse the Internet, manipulate the phone settings, and make unauthorized phone calls, yet they have the ability and convenience to message and communicate with authorized agency personnel through SmartLINK.

ACCURATE GPS TRACKING CAPABILITIES

The BI Mobile device supports continuous location tracking, zone crossing, on-demand or scheduled location detection, and callback features.

ELIMINATES RISK OF GPS SPOOFING

Many apps on Google Play and Apple stores allow clients to potentially tamper with or “spoo” GPS location collection or install foreign GPS programs manually. With BI Mobile, there is no need for an app store, therefore eliminating this risk.

MONITORING SUPPORT

Unlike other providers that are solely focused on smartphone applications, BI has customer and technical support available 24/7/365. BI Monitoring Operations staff provide live support on topics such as equipment troubleshooting, client status checks, software assistance, reports, and on-time alert notifications.
