

BI Mobile®

CONNECTING OFFICERS & CLIENTS FOR INCREASED COMPLIANCE

Developed specifically for community corrections programs, BI Mobile® alleviates challenges agencies and clients may face related to access to a phone. BI Mobile uses state-of-the-art Mobile Device Management (MDM) software to control and secure the device. Today's MDM software provides top level security to protect against hacks and virus attacks.

LEAST RESTRICTIVE FORM OF SUPERVISION TECHNOLOGY

Pre-installed with BI SmartLINK®, this solution enables scheduling, text messaging, biometric check-in, document management, community resources, and other features which agencies can use in lieu of client-worn monitors or to complement a BI GPS, alcohol, or RF device.

ABILITY TO CONTROL DEVICE ACTIVITY

BI Mobile limits client access to traditional smartphone functionality such as the ability to browse the internet, manipulate phone settings, make unauthorized phone calls, and download apps, while allowing users to message and communicate with authorized agency personnel through SmartLINK.

ACCURATE GPS TRACKING CAPABILITIES

The BI Mobile device supports continuous location of the device, zone crossing, on-demand or scheduled location detection, and callback features.

ELIMINATES THE RISK OF GPS SPOOFING

The MDM software prohibits users from downloading apps that allow clients to potentially tamper with or "spoof" GPS location collection or installing GPS programs manually.

MONITORING SUPPORT

Unlike other providers that are solely focused on smartphone applications, BI has customer and technical support available 24/7. BI Monitoring Operations staff provide live support on topics such as equipment troubleshooting, client status checks, software assistance, reports, and on-time alert notifications.

KEY FEATURES

- Size: 6.5" H x 3.0" W x 0.34" D
- Weight (with battery): 6.8 oz.
- LCD screen size: 6.5"
- Up to 100 hours battery life on a single charge
- Standby battery time: approximately 200 hours
- LTE network connectivity
- Bluetooth and Wi-Fi capable
- Multiple location technologies
- Continuous location tracking capabilities
- Build and assign inclusion and exclusion zones
- Hassle-free set-up and client interaction
- Enhanced communication with secure two-way video and two-way VoIP calling including ability to limit outbound 10-digit numbers
