- View, enter and modify data including zones, schedules, and client demographics
- Enter violation procedures
- Customize violation notifications
- Pair alerts

The Complete Monitoring Software Solution

BI TotalAccess® is a secure, web-based platform available 24x7x365. The easy-to-use software supports the full BI continuum including GPS, radio frequency, alcohol monitoring and equipment-free products. Whether you are on a desktop, laptop or smartphone, one login grants you instant visibility and management of all BI products—all to place you in control of client monitoring.

Product Overview

BI TotalAccess is an integrated, easy to use electronic monitoring (EM) software that offers agencies intuitive functionality and time-saving conveniences. A dynamic mobile app, powerful client management tools, and sophisticated, predictive analysis make TotalAccess the premiere electronic monitoring software in the industry. This intuitive software provides officers immediate access to view, analyze, and manage client data—whenever and wherever they are.

TotalAccess Mobile App – Convenient, Easy, Saves Time

For officers on the go, the TotalAccess Mobile app allows you to manage your caseload and resolve issues, even when you are away from your computer. Simply download the free BI TotalAccess Mobile app onto your smartphone or tablet, and begin supervising your caseload from anywhere, in minutes. With the TotalAccess Mobile app, you can securely activate and authenticate a device for officer use, share it with other officers or restrict access. Features include the ability to view/edit a client profiles, edit schedules, change a client's device, view and close alerts and more, all from the convenience of your smartphone.

Breakthrough Analytics Capabilities

The BI Analytics® Suite available within TotalAccess, is a powerful, advanced statistical tool designed to help supervising officers quickly identify and prioritize their highest-risk offenders. The easy to view dashboard and reports provide officers instant insight into client's travel patterns, number of alerts, proximity to risk locations, potential for absconding, and last known locations after absconding. BI Analytics is designed to alert officers of issues so that they can make informative decisions.

Advanced Mapping Capabilities

Officers with GPS caseloads have access to sophisticated mapping technologies integrated with TotalAccess. The software uses Google Maps™ mapping service to help you build zones and review client movements. Google Maps provides road, aerial, and bird's eye views of GPS points in 2D and 3D.

Comprehensive Reporting Capabilities

User-friendly reports are available within TotalAccess to review client activity, alert summaries, caseload statistics, inventory status and more. Users can schedule report delivery to a designated email or fax number.

Agency Level Access

TotalAccess incorporates several features that support agency level efficiency. Officers can access multiple agency numbers with one user name, easily view and manage inventory data across multiple agencies, and transfer equipment between them. Group zones also save officers time by enabling them to assign a set of zones to some or all of their caseload rather than building them individually for each client.
